

Bhuvansai Chilamkurthi

chbhuvansai522@gmail.com - [in](#) - [G](#) - [Globe](#) - Hyderabad, India

Objective

AI Engineering student with hands-on experience building LLM-powered agents, automation systems, and production-ready APIs using LangChain, LangGraph, and Python. Proven ability to design AI workflows and deliver scalable real-world analytics solutions.

Education

B.Tech, Computer Science and Engineering

2022 – 2026

Malla Reddy University, Hyderabad

CGPA: 8.89/10.0 (Current)

Technical Skills

- **Programming Languages:** Python, Java
 - **Generative AI:** LangChain, LangGraph, Deep Agents, RAG Pipelines
 - **Backend & API Development:** FastAPI
 - **Data Science & Machine learning:** Pandas, NumPy, scikit-learn, NLP
 - **Databases:** PostgreSQL, MySQL, Vector Databases, Redis
 - **Web Development:** React.js, HTML, CSS, Tailwind CSS
 - **Cloud Platforms:** AWS (Lambda, S3, EC2), Google Cloud Platform
 - **Automation:** Langflow
 - **Tools:** Git, Jupyter
 - **Operating Systems:** Linux, Windows
-

Experience

AI Engineer and Research Intern — GEOnius AI

Oct 2025 – Jan 2026

Remote (India)

- Built a GenAI-powered SEO automation platform analyzing brand visibility across AI search engines, enabling faster regional insights and reducing manual analysis effort by 60
- Developed a Website Assistant (Text-to-SQL Agent) that converts natural language queries into SQL to fetch live business metrics and generate contextual summaries.
- Designed and orchestrated multi-agent AI workflows using LangChain and LangGraph for enterprise-scale analytics and decision support.
- Implemented prompt engineering and agent orchestration strategies to improve response accuracy and reduce hallucinations.
- Collaborated with product and engineering teams to prototype and deploy systems to production.

Key Projects

HealthBot: Personalized Medical Report Analyzer

[GitHub](#)

- Architected a RAG-based AI medical assistant using LangChain to analyze PDF reports and prescription images, enabling context-aware Q&A over user-uploaded medical documents.
- Implemented an end-to-end document ingestion and retrieval pipeline using Mistral OCR, recursive text chunking, FAISS vector search, and Gemini LLMs, achieving 90% response accuracy.

Automated Book Publisher

[GitHub](#)

- Designed and implemented an AI-driven multi-agent pipeline for automated book publishing, enabling scalable end-to-end content generation.
- Built an interactive Streamlit interface with chapter navigation, semantic search, and version management for generated content.
- Integrated Gemini LLMs for long-form content generation and ChromaDB for scalable semantic storage and retrieval, with automated content ingestion via web scraping.

- Built a multimodal AI web platform using LangChain and FastAPI to detect and combat misinformation across text, images, videos, URLs, and social media content.
 - Integrated Gemini Pro Vision and Groq LLMs to perform fact-checking, bias detection, and neutral news summarization, achieving 95% classification accuracy.
 - Implemented features including batch fact-checking, bias radar, and educational prompts, reducing fake content sharing by 25–40%; deployed on Vercel and Render with scalable AI pipelines.
-

Certifications

- AWS Academy Graduate Cloud Foundations - AWS Academy
- Python for Everybody - Coursera
- Introduction to LangGraph - LangChain Academy
- Google Cloud Computing - Google Developer Student Club

Achievements

- Secured Second Prize in National Hackathon (500+ participants) for Generative AI chatbot.
- National Semi-Finalist, Tata Imagination Challenge, top 3 rounds.
